Market Commentary

Commentary: Last week's USDA report on Friday caused some concerns and immediately the market added premium. Futures increased across the board on Friday. There were many bullish characteristics for the market. South American production estimates were lower, it is still too wet to sow crops in the U.S., U.S. carryover is still extremely tight and the USDA did not change this number, and biofuel mandates were increased. On the bearish side, Chinese exports were lowered, and speculators still remain on the sidelines. Weather is still going to drive the market for the most part. Farmers need to get in the fields and plant. They can get their planting done really fast with modern equipment though. Currently it is still a matter of some lower yields for corn or swapping to soybeans. This would cause corn futures to jump, which usually takes everything with it.

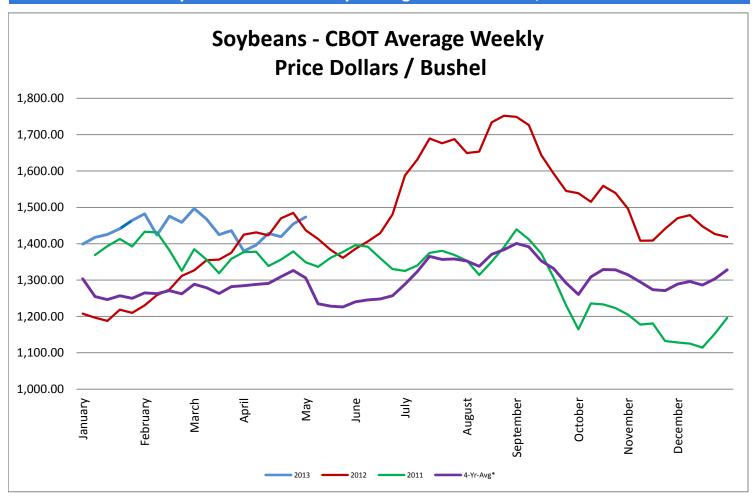

Corn futures closed between \$6.75 and \$6.94-1/2 per bushel, ending the week at \$6.87-3/4. Soybean futures closed between \$14.44-1/2 and \$1491-1/4 per bushel, ending the week at \$14.88-1/4. Soybean meal futures closed between \$413.10 and \$444.30 per short ton, ending the week at \$444.30. Soybean oil futures closed between \$0.4866 and \$0.4917 per pound, ending the week at \$0.4917. Wheat futures closed between \$6.93 and \$7.16-1/4 per bushel, ending the week at \$6.96-3/4.

Commodity Information: Commodity information found in this sheet is publically available. It can be found from numerous sources, all of which are noted. This report is for informational purposes only. Please do not make hedging or buying decisions based on this report. Please note that rounding can affect the percent of change values.* Paul's Currency Index compares the U.S. Dollar to five other currencies, Euro, British Pound, Swiss Frank, Canadian Dollar, and Chinese Juan.
